Spanish
Native

English
B2 · daily working language

STRENGTHS

Teamwork · Autonomy · Problem solving · Fast, self-taught learner

Jesús Márquez Delgado

Web Developer · Drupal, PHP & React

Computer engineer specialised in enterprise web development with Drupal, PHP and React. At 1xINTERNET I build and maintain multilingual corporate sites for international brands such as Circor, Maggi and Thomy, working in English with a distributed team. Outside work I build full-stack and mobile side projects and games.

EXPERIENCE

Web Developer — 1xINTERNET March 2022 – Present
Drupal agency building enterprise websites for international brands

- Drupal site building and backend development (PHP) for multilingual corporate sites of brands such as Circor, Maggi and Thomy.
- Front-end development with React, Twig and Tailwind CSS integrated into Drupal themes.
- Turning client requests into planned, estimated technical tasks.
- Daily communication in English with a multicultural, distributed team.
- Ongoing maintenance and evolution of production sites.
- AI-assisted development with Claude Code to speed up delivery and problem solving.

TECHNICAL SKILLS

Core: Drupal (backend, site building, theming) · PHP · React · JavaScript · TypeScript · Tailwind CSS · Twig

Also: Symfony · Laravel · Angular · Node.js · Express · Django · React Native · Python · Java · C/C++ · C#

Data & infrastructure: MySQL · MongoDB · AWS · Netlify (Functions, Edge Functions) · Apache · Docker · DDEV · Git · GitHub Actions

Games & XR: Godot · Unity, including VR/AR development

SELECTED PROJECTS

Pandeconomy github.com/Jesus-md-dev/pandeconomy
Personal finance Android app with recurring expenses, charts and home-screen widgets in five languages; CI with ESLint, TypeScript and Jest. React Native · TypeScript · MMKV · GitHub Actions

Videoclub Local github.com/Jesus-md-dev/videoclub-local
Self-hosted video library for the home network with a retro video-store UI, auto-generated covers and an Android TV client. Node.js · Express · React · Vite · ffmpeg · Android

Bahía Lectora github.com/Jesus-md-dev/bahia-lectora
Book club website whose data comes from Google Sheets and the Google Books API at build time. React · Vite · Tailwind CSS · Google APIs · Netlify

Project Expenses Manager github.com/Jesus-md-dev/project-expenses-manager
Final degree project: full-stack app to manage shared project budgets, with e-mail notifications. Angular · TypeScript · Django REST · MySQL
